LDR512: Security Leadership Essentials for Managers™

Security leaders need both technical knowledge and leadership skills to gain the respect of technical team members, understand what technical staff are actually doing, and appropriately plan and manage security projects and initiatives. This security managers training course will teach leaders about the key elements of any modern security program. Learn to quickly grasp critical cybersecurity issues and terminology, with a focus on security frameworks, security architecture, security engineering, computer/network security, vulnerability management, cryptography, data protection, security awareness, cloud security, application security, DevSecOps, generative AI (GenAI) security, and security operations. This is more than security training. You will learn how to lead security teams and manage programs by playing through twenty-three Cyber42 activities throughout the class, approximately 60-80 minutes daily.
